

Microfiber Cleaning Solutions for Cleaner, Greener, Healthier Facilities

Products, Laundering, & Replenishment Services

UniFirst **U1st**

If Germs Evolve Shouldn't Your Cleaning Solutions?

In tests published by the EPA, microfiber cleaning products were proven to remove up to 98% of bacteria and 93% of viruses from surfaces using only water (no chemicals).¹

UniFirst delivers advanced microfiber cleaning products and picks up your soiled ones on a regular schedule. We maintain inventory, take care of hygienic laundering, and even replace any missing or worn out products. So you always have what you need on hand...and it's all for a low weekly fee.

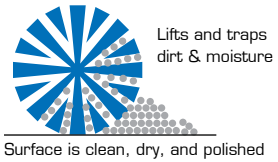

¹ United States Environmental Protection Agency. *Environmental Best Practices for Health Care Facilities: Using Microfiber Mops in Hospitals.*

What is microfiber?

Microfiber is densely constructed polyester and polyamide (nylon) fibers about 1/16 the thickness of a human hair. It holds six times its weight in water, making it more absorbent than conventional cleaning products. Its positively charged fibers attract and hold dust like a magnet and penetrate the microscopic pores of most surface materials. These characteristics make microfiber ideal for cleaning smooth surfaces in commercial environments.

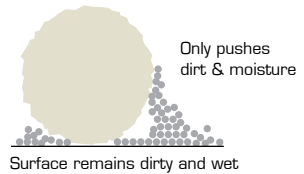

Microfiber

Eliminate germs.

Cleaning multiple surfaces with the same mops or wipers over time can spread pathogenic microorganisms. And processing contaminated cleaning products in-house is inefficient, time consuming, and costly. UniFirst helps remove dirt- and bacteria-laden cleaning products from your facility. Our microfiber systems are also proven to minimize cross-contamination during janitorial tasks.

Cotton Fiber

The smart choice for your facility.

Microfiber Cleaning Solutions from UniFirst help you present a professional appearance, fight dirt and germs, and lower your cleaning and maintenance costs. Our versatile microfiber cleaning products can reduce water and chemical usage by up to 95%, while decreasing labor time. And our microfiber product laundering and disinfection services eliminate solid waste by making mops and cleaning cloths safe to re-use again and again. In all, using our microfiber cleaning system makes sense. Your UniFirst Microfiber Cleaning Solution is a **complete system** that increases productivity and lower your costs.

- Easier, more efficient cleaning
- No up-front investment
- Lower annual costs
- Infection & bacteria control
- Regularly scheduled pickup & delivery
- Professional hygienic laundering
- Inventory management & adjustments as needed
- Free training & education
- Products always on hand & available

Now you can use the same professional cleaning solutions that healthcare facilities use.

To fight dirt and germs more effectively and efficiently, hospitals and other healthcare practices nationwide have turned to the **UniFirst 4-Step Facility Service System**, which includes our innovative microfiber cleaning solutions. Now you can employ the same professional tools and services that have helped healthcare practitioners lower their housekeeping and maintenance costs and achieve better cleaning results.

Step 1	Step 2	Step 3	Step 4
			
Capture dirt and moisture at entrances with Scraper Mats.	Grab hold of residual soiling with decor enhancing Walk-Off Mats.	Maintain floors, counters, and hard surfaces with microfiber mops and wipers.	Keep restrooms well stocked with high quality soap, paper, and air freshener products.
