ARMOREX FR® FABRIC OPTIONS

UltraSoft,® from Westex by Milliken, is an arc-rated 88/12 cotton/nylon blend. This comfortable fabric option is a classic choice for NFPA 70E, NFPA 2112, and OSHA compliance.

CXP® ("Next Generation" Nomex®). from Westex by Milliken, is an inherently Flame Resistant (FR) arc-rated fabric made of DuPont Nomex® III A. Noted for its protective qualities and increased comfort, feel, and breathability, this fabric complies with NFPA 70E, NFPA 2112, and OSHA standards.

Tecasafe® Plus, from TenCate, is one of the most innovative arc-rated FR fabric options on the market. This soft, inherently Flame Resistant fabric is a tri-blend of FR fibers that offers superior flame protection, moisture wicking, and durability. Complies with NFPA 70E, NFPA 2112, and OSHA standards.

Nomex® IIIA is DuPont's classic aramid arc-rated fabric featuring inherent FR properties, along with static dissipative filaments to reduce static build-up. Complies with NFPA 70E, NFPA 2112, and OSHA standards.

FR Denim is arc-rated 100% Flame Resistant cotton denim that complies with NFPA 70E, NFPA 2112, and OSHA standards.

ATPV RATINGS (ARC Ratings) and PPE CATEGORIES

When evaluating FR fabrics, hazard risk assessments and arc thermal performance value (ATPV or arc rating) should be taken into account. ATPV ratings appear on the labels of all UniFirst FR apparel.

Arc Thermal Performance Value (ATPV), also known as arc rating, represents the thermal exposure from an electric arc that will create a second-degree burn. All Armorex FR clothing is labeled with ATPV values; the higher the number, the better the protection.

NFPA 70E Personal Protective Equipment (PPE) Categories are based on specific job tasks and range from PPE Category 1, which allows single-layer FR arc-rated shirts, pants or coveralls, up to Category 4, which requires a FR arc-rated shirt and pants, plus a double layer switching coat and pants. PPE Categories are used to determine the necessary arc rating of a garment worn for a given task.

FR GARMENT PERSONALIZATION

To comply with flame resistance safety guidelines, UniFirst recommends only standard size company and wearer name emblems on chest for personalization. Any other personalization options on FR garments, including those that utilize FR emblems and/or FR thread, are at the discretion and the responsibility of the employer and/or end user.

CHOOSE YOUR LEVEL OF PROTECTION

Visibility garment selection should be based on expected use settings and work activities being performed. These are designated as off-road (type O), roadway and temporary traffic control (type R), or public safety activities (type P).

ANSI Type O, Class 1

Performance Class 1 offers the minimum amount of High Visibility materials to differentiate the wearer from non-complex work environments and is only appropriate for off-road environments.

ANSI Type R or P, Class 2

Performance Class 2 is considered the minimum level of protection for workers exposed to roadway rights-of-way and temporary traffic control (TTC) zones. Garments will have additional amounts of High Visibility materials that allow for better definition of the human form.

ANSI Type R or P, Class 3

Performance Class 3 provides more visibility to the wearer in both complex backgrounds and through a full range of movement by the required placement of background, retroreflective, and combined performance materials on the sleeves and pant legs (if present). Garments have an even greater minimum level of High Visibility material the apparel must contain. A garment or vest without sleeves worn alone is NOT considered Class 3 protection.

ANSI Class E

High Visibility garments that do not qualify as meeting the requirements of the standard when worn alone, but when a Class E item is worn with a Class 2 or Class 3 garment, the overall classification of the ensemble is Class 3.

Enhanced Visibility

For workers who are working in lower-risk environments, but who can still benefit from the extra security of heightened visibility, particularly in low-light conditions. Enhanced Visibility garments are not ANSI rated.

Garment Personalization

To comply with safety guidelines, UniFirst recommends only standard size company and wearer name emblems on chest for ANSI-rated High Visibility garment personalization. Any other personalization options are at the discretion and the responsibility of the employer and/or end user.
