The Choice for visibility safety apparel

Compliance solutions for OSHA and the Federal Worker Visibility Act.
Choose your level of protection

UniFirst-made Class 2 and Class 3 garments are ANSI/ISEA certified and feature:

For workers who work on or near roadways, in proximity to moving vehicles, or in environments where their movements might be camouflaged by nature or low-light conditions, UniFirst offers a selection of safety-rated, high visibility and enhanced visibility garment options. Our visibility apparel can help keep workers safe and businesses compliant with federal and other safety standards.

Visibility garment selection should be based on expected use settings and work activities being performed. These are designated as off-road (type O), roadway and temporary traffic control (type R), or public safety activities (type P).

**ANSI Type O, Class 1**
Performance Class 1 offers the minimum amount of high visibility materials to differentiate the wearer from non-complex work environments and is only appropriate for off-road environments.

**ANSI Type R or P, Class 2**
Performance Class 2 is considered the minimum level of protection for workers exposed to roadway rights-of-way and temporary traffic control (TTC) zones. Garments will have additional amounts of high-visibility materials that allow for better definition of the human form.
ANSI Type R or P, Class 3
Performance Class 3 provides more visibility to the wearer in both complex backgrounds and through a full range of movement by the required placement of background, retroreflective, and combined performance materials on the sleeves and pant legs (if present). Garments have an even a greater minimum level of high visibility material the apparel must contain. A garment or vest without sleeves worn alone is NOT considered Class 3 protection.

ANSI Class E
High visibility garments that do not qualify as meeting the requirements of the standard when worn alone, but when a Class E item is worn with a Class 2 or Class 3 garment, the overall classification of the ensemble is Class 3.

Enhanced Visibility
For workers who are working in lower-risk environments, but who can still benefit from the extra security of heightened visibility, particularly in low-light conditions. Enhanced visibility garments are not ANSI rated.

OSHA Standards:
Require employers to perform a hazard analysis to decide which ANSI/ISEA 107 performance class of high visibility garments is needed based on the work conditions anticipated. Workers on all roads or highways exposed to the potential danger of being struck by vehicles must wear appropriate high visibility apparel. This expands upon the Federal Highway Administration’s Manual of Uniform Traffic Control Devices (MUTCD), which imposes the requirement on Federal-aid highways.

Federal Worker Visibility Act:
States, “All workers within the right-of-way of a Federal-aid highway who are exposed either to traffic (vehicles using the highway for purposes of travel) or to construction equipment within the work area shall wear ANSI/ISEA Class 2 or Class 3 high-visibility safety apparel.” —23 CFR PART 634

Garment Personalization:
To comply with safety guidelines, UniFirst recommends only standard size company and wearer name emblems on chest for ANSI-rated high visibility garment personalization. Any other personalization options are at the discretion and the responsibility of the employer and/or end user.

All garments in this brochure are available for both rental and purchase, unless otherwise noted.
